Fund Features

Unique 'relative value' investment strategy: The Fund adopts a relative value investment strategy to access a range of fixed income return sources that are independent of interest rates.

Tight risk control: The Fund specifically targets low volatility returns by using a range of risk management strategies.

Diversification benefits: The Fund offers significant diversification benefits when combined with conventional bond, credit and equity investments in an investment portfolio.

Capital preservation: The Fund prioritises capital preservation by only investing in high quality government bonds, related derivatives and cash like investments. However, the Fund is not guaranteed.

Protect long term purchasing power: The Fund explicitly targets a return exceeding Australian inflation rates to protect long term purchasing power.

Daily liquidity: The Fund only invests in the most liquid segments of global fixed income markets.

Experienced and stable investment team: Ardea's investment team has decades of experience across global fixed income markets. Majority employee ownership of the Ardea business fosters team stability.

Fund Facts

Portfolio Manager	Ardea Investment Management
Investment Objective	The Fund targets low volatility returns exceeding cash rates and inflation, by investing in a global portfolio of high quality government bonds that prioritises capital preservation and liquidity.

Market Commentary

Please see the [Ardea website](#) for our latest thoughts on markets and investment themes.

Portfolio Commentary

The portfolio delivered a return of +0.11% for the month.

Rolling quarterly performance remains within the normal range of expected performance variability, based on the portfolio's volatility target.

As usual, performance drivers for the month were diversified across small gains / losses generated by many modestly sized trades, with no unusually concentrated performance drivers.

Curve RV strategies contributed positive performance. (+0.30%)

Bond RV strategies contributed negative performance. (-0.07%)

Option exposures contributed negative performance. (-0.03%)

Inflation beta exposure contributed negative performance. (-0.08%)

Explanatory Notes

- The normal range of expected performance variability is defined relative to the portfolio's volatility / TE target (2.0% p.a.). Based on this, quarterly excess returns should mostly be within a range of -0.5% / +1.5% (1 std dev band, 68% of sample) and sometimes outside this range, but no wider than -1.5% / +2.5% (2 std dev band, incremental 27% of sample).
- Curve RV strategies seek to profit from RV pricing anomalies in the shapes of interest rate curves.
- Bond RV strategies seek to profit from RV pricing anomalies in specific government bonds.
- Option exposures stem from RV trades that involve buying interest rate options. These exposures are biased to outperform in periods of market stress and are used to balance risk vs other types of RV trades that may temporarily underperform at such times.
- Inflation beta exposure stems from the portfolio's structural exposure to market-based inflation pricing through holdings of inflation-linked bonds and inflation swaps.

Understanding Performance

The Fund's highly differentiated investment approach generates returns exclusively from capturing RV mispricing opportunities across global interest rate markets. This approach is intentionally independent of the level of bond yields, the direction of interest rates and broader bond market themes.

The Fund's portfolio construction process intentionally diversifies risk across many different types of independent and modestly sized RV trades. Therefore, performance is the cumulative result of interactions between hundreds of trades entered, exited, and held over the preceding months.

For these reasons, the Fund's performance is ordinarily not driven by a few key trades, nor can it be mapped to broader market fluctuations or macro themes. This is intentional, because the Fund aims to deliver volatility-controlled returns that exhibit low correlation to the performance of government bond, credit, and equity markets. This is precisely why the Fund can offer compelling diversification benefits when combined with conventional investments.

Please note that monthly performance attribution is heavily influenced by short-term 'noise' and ordinarily offers little genuine information value.
